A MODULAR ADAPTABILITY MIXED-USE DEVELOPMENT

NUVALI | LAGUNA

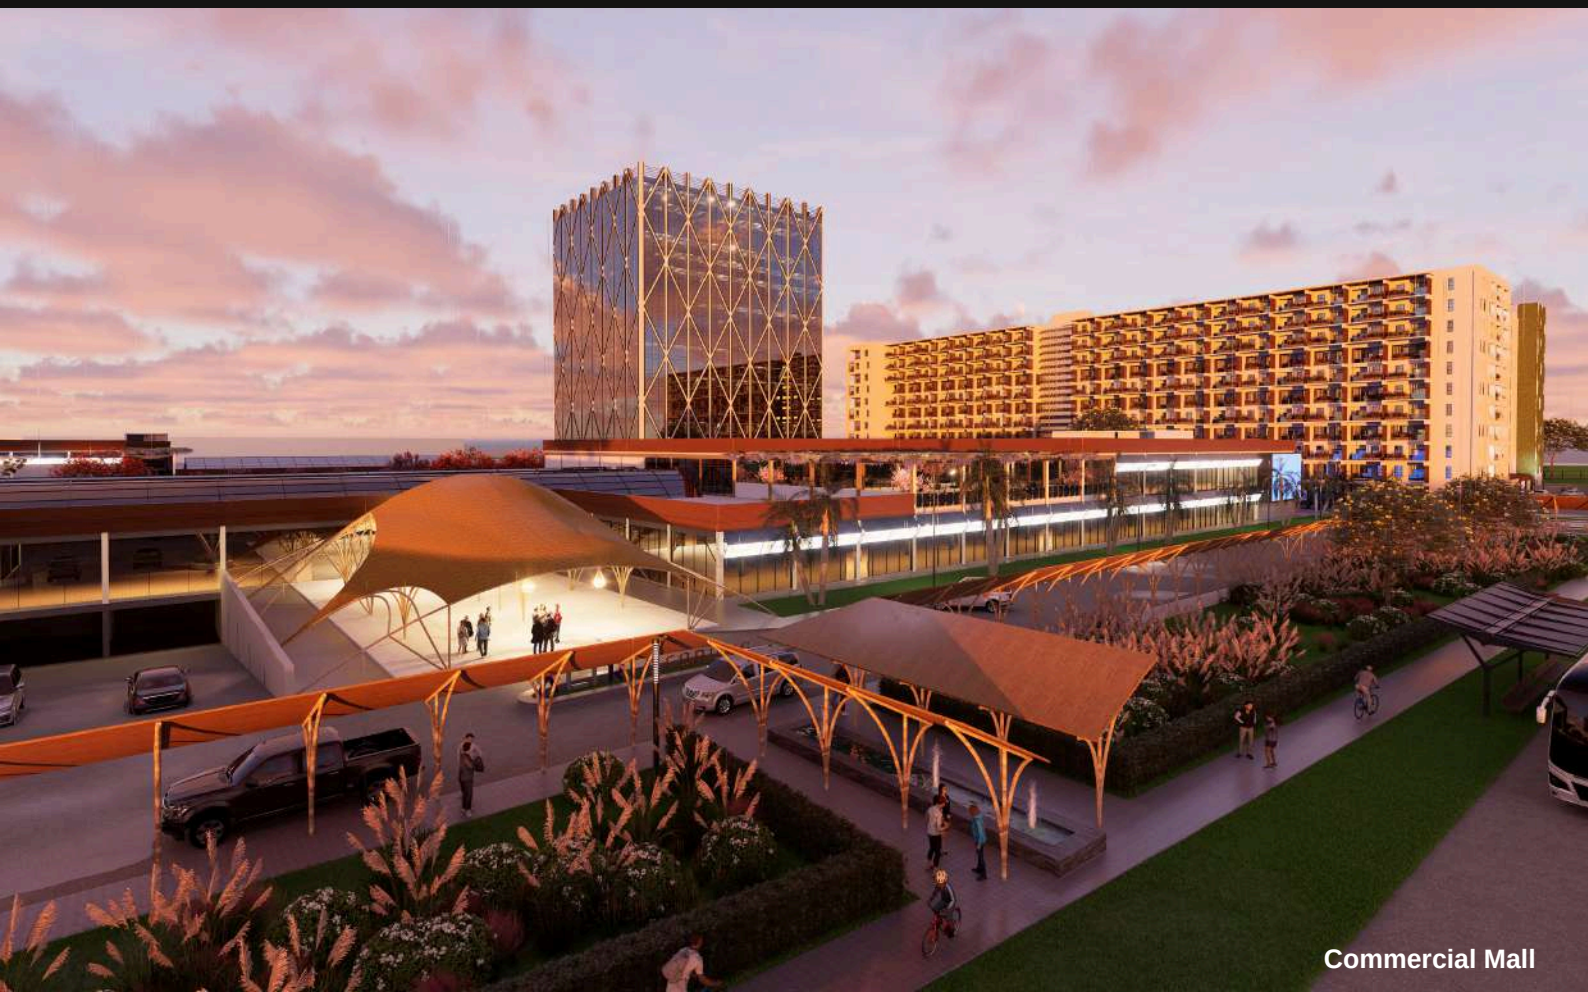

This Modular Development has three major spaces, namely the low-rise commercial area, commercial office tower and a multi-level residential condominium. Roads and bridges connects these major areas through communal spaces that services its users.

The design is heavily inspired and grounded by its concept of adaptability through its modular approach. The buildings features adaptive modular materials that can change according to demand and needs of the owners and users. The eastern area is the main access facing the Nuvali boulevard. The development is within the premium estate of Nuvali, Calamba perfect for its pedestrian users and visitors. About half of the development is intended for a walkable community with pedestrian path and parks.

The mall courtyard doubles as a semi-private events/park/local shop area that will help the local community and advertises seasonal events. The residential courtyard services communal spaces as well as a private space for its residents. The southern portion of the development serves as the major community park for the residential estates near the development as well as a leisure park for the students at the school located at the western side of the area.

THE SPOT: A MIXED-USE DEVELOPMENT

BGC | TAGUIG

The Spot has four main areas, specifically the office tower, the two residential towers and the commercial shopping area.

The aspect of this project is to maximize the space provided within the City District provided that it only has over a hectare of lot area. This development includes a multi-storey office spaces provided mainly for BPO businesses, residential towers consisting of one to three bedroom units and the commercial shopping mall that services both the office and residential as well as the existing community within the city district.

Through subtractive process, the office benefits from it by having a reduced area as its facade as well as reducing massive air resistance. While the residential is divided into two towers that improves air flow on its units given that they have all exterior open air balcony.

Project Name: The Spot Development

Location: Mckinley Pkway, Bonifacio Global City, Taguig
